Modules of the bot

Construct a knowledge base from text Text source: [comp18776.pdf](#)

- Extract sentences and section titles, save to tables.
- Parse sentences into tokens, save to a table.
- Extract entities from tokens, save to tables.

Link entities and sections

- The hierarchy of section titles naturally defines a tree.
- Link entity A to entity B (arrow) if a sentence flows from A to B.
- Link entity A to section I, if A is present in I.
- Add ‘count’ to the links, and set ‘weight’ = $1 / \text{‘count’}$.

Generate utterance based on the text that echoes a theme

- Find shorted paths (SP) of all pairs in the DiGraph of entities and sections.
- For a chosen section of focus
 - first, find entities that are most “similar” to the selected keyword of a theme,
 - next, compose utterances by tracing SPs from these entities to the section.
